

Country

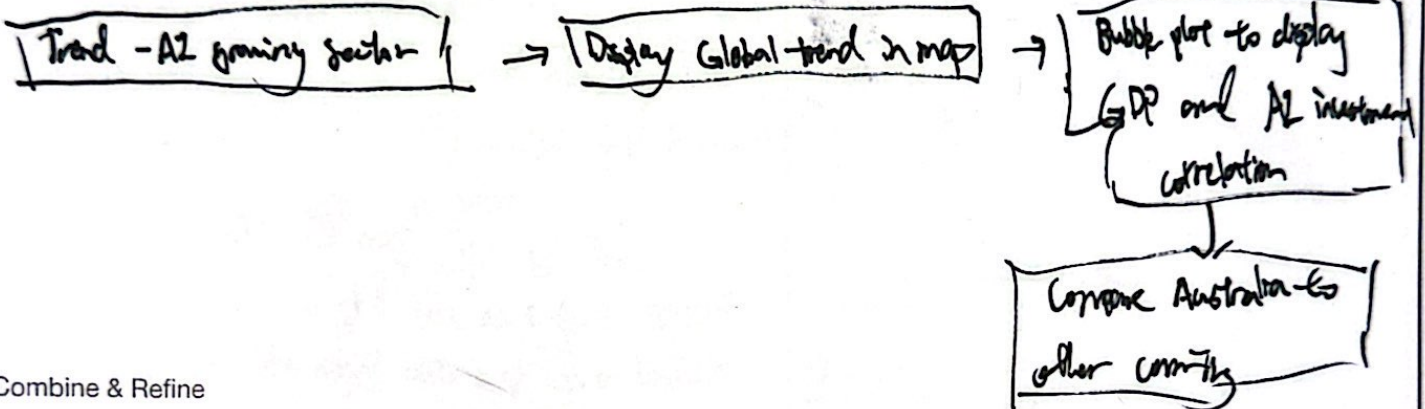

Differentiate Australia from rest of country with different colours.

Different country showing different pie,

Categorise

Combine & Refine

Summarise and question

- 1) Is the visualization complex enough
- 2) Is the purpose of this visual clear.

- ① The title
- ② The remark
- ③ Bar chart display the trend of AI
- ④ Line graph showing AI scholar comparing Australia to rest of the world
- ⑤ World Map of AI Index
- ⑥ Bubble plot of scale and intensity
- ⑦ Attribute plot to show value

Parti / Focus

In this visual, the ⑤ map will be the most important visual. so it'll take more space compare to other visual. We might also need a bigger title to emphasize the topic.

Title AI

Description AI trend with Australia

Components / Operations

For ④ and ⑦ we can have drop down to display different country.

- We need implement bars with negative

Pro & Cons

Pro

- Symmetric design
- Easy to read with look.

Cons

- To less detail
- Data not being obvious enough to distribute message.

Components / Operations

For ④ we can apply filter for continent and population
 ③ and ⑥ we can have selection for countries.

Parti / Focus

Map and title get centralized and the rest of diagram equally share the rest of the space.

Pro & Cons

Pros
 - Centralized important location
 - Symmetrical layout

Cons
 - Not a clear visual path present

Parti / Focus

More focus should be given to title and world map, hence we can allocate more space for it

Title AZ trend of the world

Description

AZ trend had been expanding, we need to see if projection was up-to-date

Components / Operations

For ④ we can have filter for continent, and population

For ⑤, ⑥ we can have dropdown to display different country

Pro & Cons

Pro

- straight forward visual part
- balance layout and symmetric

Cons

- too long, require scrolling

~~Hand~~

① AI in Australia and the rest of the world

② Remarks:

Parti / Focus

As mentioned (3) and (4) swap, as (6) is more on global data, so we might display all the global data, then come to discuss Australian AI data at (4).

Also we can use different colour for all Australian data to highlight it from the rest.

For more we standardise font through out the dashboard.

We can use green as primary colour for dashboard as Nvidia is global leading AI firm, and it's colour is red representing AI.

Name Ron 2hi

Date

Title AI in the world and Australia

Description

As AI is growing really fast we need to have data visual to check if Australia is in the right track.

Components / Operations

Switch place for (3) and (4) to create better visual path.

For (4), we can use drop down list to filter different attribute for the chart.

For (6), we can use continent filter and population filter.

For (7), we can have dropdown to display different country attribute, (Top countries only)
